

CADTalk

PARTNER FACTSHEET

CAD/PDM/PLM INTEGRATION

CADTalk is a real-time integration between CAD/PDM/PLM Software and SYSPRO. CADTalk eliminates the duplicate data entry from engineering designs to SYSPRO while also increasing the data accuracy of the BOMs within SYSPRO.

CADTalk works with multiple levels of BOMs simultaneously in a fully indented BOM view allowing adding/updating of Routes, Structures, Stock Codes, Stock Warehouses, and Approved Manufacturers at any level. CADTalk can be used by engineers directly inside of the engineering software or by non-engineers in the company using the standalone interface that can directly read CAD file formats without a license of the CAD software. CADTalk supports all major CAD/PDM/PLM systems on the market.

The Benefits of CADTalk

- Significantly reduces engineering to manufacturing lead time
- Eliminates duplicate data entry
- Increases data integrity and BOM accuracy
- Quick and easy setup. Be up and running in 16 hours or less
- Configured software rather than custom software
- Ongoing support for future CAD and SYSPRO version releases
- Delivered and supported by a Certified SYSPRO Development Partner

CADTalk Features

- Manage multiple levels of BOMs simultaneously
- Map any CAD/PDM/PLM field to any SYSPRO field including custom form fields
- Create and update stock codes, structures and routings in SYSPRO directly from CAD/PDM/PLM data
- Drag/drop and quick data entry all with graphical interface
- Compatible with SYSPRO ECC module (Engineering Change Control)
- Fully integrated real-time solution
