

# Exportmaster

## HARDWARE RECOMMENDATIONS

### EXPORT DOCUMENTS AND ADMINISTRATION

---

The following are the *minimum* hardware configurations recommended for running Exportmaster for Windows.

#### Single-user system on a stand-alone PC

- 2 GHz Intel (or compatible) processor or better
- 2 Gb RAM. More RAM will improve performance
- 100GB or larger hard disk drive
- 17" display running at 1024 x 768 or better preferred
- Windows 7 or later. Either 32 or 64-bit (Exportmaster is a 32-bit application natively)
- Back-up system

#### Multi-user system on a local area network

##### Server

- Windows Server 2008r2, 2012 or later operating systems with formalised backup facility. The disk and memory capacity for the network operation will normally be sufficient for Exportmaster. Allow a minimum of 10Gb disk space for Exportmaster programs and shared data. An installation of a new, empty system will require about 400MB initially.
- 100Mb (or better) LAN connections to client workstations

##### Workstations

- As for single-user, stand-alone use
