Nestfab

## PARTNER FACTSHEET

NESTING

Nestfab saves you time and money, while using your material more effectively - you have full control over nesting settings such as part quantities, sheet sizes and part rotation to meet the demands of any cutting technologies and materials. Finding excellent nests quickly and continuously looking for improvements for outstanding material usage, watch as Nestfab makes saving after saving off your bottom line. Favouring repeated nests where possible can dramatically reduce programming time while utilising common cuts can reduce the cutting time.

Nestfab is a simple to use, extremely effective nesting product that uses industry standard Computer Aided Design (CAD) formats to easily slot into any tool chain and workflow.

Nestfab Features

- **Powerful Nesting:** Full control over nesting settings such as part quantities, sheet size and part rotation to meet the demands of any cutting technologies and materials

- **Interactive CAD Importer:** As multiple parts are identified from one CAD file there is no need to split out your parts into multiple CAD files. Take full control over which layers and colours should be ignored or imported and their purpose for nesting (e.g. nesting outline or information to attach), the importer quickly checks that imported parts match the original drawing with linked previews (original on the left, imported on the right). Not forgetting that industry standard CAD formats are supported up to the very latest versions

- **Export Nests:** Save nested layouts to industry standard CAD formats, with a huge selection of export options, for maximum compatibility with your existing workflows and tool chains

- **Printed Reports:** Print out a variety of nesting reports to assist your production team before and after cutting. By using the detailed nesting report for easier identification of parts after nests have been cut, you'll speed up the picking of parts by up to 40%

- **Workflow Automation:** Export a list of your parts from your planning system as a CSV file and Nestfab will import all of these for you in one operation. XML and CSV based integrations are available via command-line for seamless integration with other systems and workflows

- **Modern User Interface:** Nestfab makes it easier and quicker to set up your nesting projects than any other nesting software. Nestfab have designed everything to be clean, modern and above everything else very easy to use
